

Epilation Zone

professional waxing solutions

Epilation Zone or better known as **EZ Waxing Systems** in South Africa are uniquely formulated, fully imported high grade waxes that offer the best solutions to waxing. Based on European formulations this wax is exported to many countries, Europe, Russia, USA and Brazil (being one of the largest importers). Each country that imports the wax has the licence to label it under their own brand, this makes it affordable and economical. Most importantly it can be used on all skin types with very little or no discomfort thanks to the low melting temperatures and unique formulations. EZ has a range of variants to suit your needs.

REWARDS SYSTEM

On every EZ wax you will find a colour coded sticker, collect 10 of the same colour stickers and exchange for 1 of the same wax free. Or continue collecting your stickers to exchange for a wax heater or other Depilatory products. Ask your sales consultant for a card to attach your stickers to and save. T&C apply.

Yellow: Cartridges 100g

Green: Strip Wax 800g

Orange: Hot/Film Wax Bans 1kg

Blue: Paraffin Wax 1kg

EZ Strip Wax, often called Cold Wax, is extremely efficient in removing hair with depilation strips. It is applied extremely thinly to the skin in the same direction of the hair. The strip is then firmly pressed against the wax in a few firm strokes. The strip is then removed against the direction of hair growth. It can remove even the shortest of hairs effectively. EZ Strip wax also has a benefit of being less sticky which allows it to adhere more to the hair itself than the skin, this alleviates the discomfort associated with waxing. All waxes contain coconut oil for moisturization. Available in 100g cartridges and 800g tins.

Hard Wax Beans

ROSE

EZ Hot Wax is a method more suitable to those stubborn areas eg bikini, underarm and facial. A thin layer (approximately 2mm) of hot wax is applied against the hair (opposite direction) to 'catch & lift' the hair. Once cooled slightly the wax is then removed in the same direction as the hair growth. This minimises 'breaking' of the hair and is less painful. EZ hot wax is packed in 1kg bags of 'beans' which allow for easy melting and readiness.

EZ Film Wax is a new generation wax, sometimes called 'elastic' wax or 'chewing gum' wax. Film wax is very similar in application to EZ Hot wax but allows for an even thinner application (approximately 1-2 mm). It is very economical and easy to melt. All EZ Hot & Film Wax contain moisturising coconut oil

EZ Paraffin Wax is available in 1kg bags of different variants, suitable for all types of applications.

EZ Strip Wax Cartridges 100g

EZ-CART-ALOE

ALOE VERA

Great for sensitive skins
Aloe Barbadensis Leaf Extract provides soothing relief to the skin and is a powerful anti-inflammatory.
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins
 Chrome oxide a natural mineral pigment
 Regenerating & moisturising

EZ-CART-AZULENE

AZULENE

Suitable for sensitive skins
 Great for students or 1st time users
 Azulene flavour
 Hydrated Chrome Oxide is a natural mineral pigment

EZ-CART-BANANA

BANANA

Suitable for dry & mature skins
 Lower operating temperature of a creme
 Banana flavour
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins

EZ-CART-CHOC

DARK CHOCOLATE

Ideal for sensitive skins
Theobroma Cacao Seed butter protects & repairs, is anti-inflammatory & soothing with less irritation and redness
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins
 Iron Oxides are gentle & non-toxic & will not irritate the skin.

Ideal wax for Men and clients with coarse hair

EZ-CART-CREME

WHITE CHOCOLATE

- Assists in removal of fine, soft hairs often Missed by clear waxes
- Lower operating temperature of cremes
- Suitable for all skin types especially fair-Skinned persons
- Titanium Dioxide prevents irritation

EZ-CART-GREEN

GREEN TEA

Camellia Sinensis Leaf Oil (Green Tea) is an anti-oxidant & is skin conditioning & soothing
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. It is gentle & lubricating ideal for redness-prone skins & clients
 Chrome oxide a natural mineral pigment
 Regenerating & moisturising

EZ-CART-LEMON

EZ-CART-LEM-SM (facial roller)

LEMON

Citrus Medica Limonum Peel oil is cleansing
 Lemon oil is uplifting
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. It is gentle & lubricating ideal for redness-prone skins & clients
 Lower operating temperature of cremes

EZ-CART-OLIVE

OLIVE

Olive Oil that has soothing & nourishing benefits to skin
 Effectively grips short & stubborn hairs
 Olive Extract reduces inflammation and fights skin infections
 Hydrated Chrome Oxide is a natural mineral pigment

EZ-CART-SENS

ROSE / PINK SENSITIVE

Ideal for sensitive skins
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. It is gentle & lubricating ideal for redness-prone skins & clients
 Lower operating temperature of cremes

EZ-CART-WARM

HONEY / WARM

Suitable for all skin types
 Slightly stickier thereby suiting 1st time users

EZ Strip Wax tins 800g

EZ-WAX-ALOE

ALOE

Great for sensitive skins
Aloe Barbadensis Leaf Extract provides soothing relief to the skin and is a powerful ant-inflammatory.
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. Regenerating & Moisturising.
 Chrome oxide a natural mineral pigment

EZ-WAX-AZULENE

AZULENE

Suitable for sensitive skins
 Azulene flavour
 Hydrated Chrome Oxide is a natural mineral pigment
 Great for students or 1st time users

EZ-WAX-CREME

WHITE CHOCOLATE

Assists in removal of fine, soft hairs
 Lower operating temperature
 Suitable for all skin types
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins.

EZ-WAX-LEMON

LEMON

Lemon oil is uplifting
Citrus Medica Limonum Peel oil is cleansing and Lemon oil is uplifting
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. It is gentle & lubricating ideal for redness-prone skins & clients
 Lower operating temperature

EZ-WAX-WARM

HONEY / WARM

Suitable for all skin types
 Slightly stickier thereby suiting 1st time users

EZ Hot Wax Beans 1kg

EZ-FILMBEAN-RED

RED FILM

Applies very thinly
 Soft & pliable
 Contains **Beeswax**

EZ-HOTBEAN-AZ

AZULENE

Contains **Beeswax**
 Camphor soothes inflammation & redness & has antibacterial & antifungal properties
 The gentle benefits of *Guaiazulene*, (a Chamomile plant extract) alleviates redness & swelling

EZ-HOTBEAN-CHOC

CHOCOLATE

Contains **Beeswax**
 Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins.
Theobroma Cacao Seed butter protects & repairs, is anti-inflammatory & soothing with less irritation and redness
 Iron Oxides are gentle & non-toxic & will not irritate the skin. Ideal for sensitive areas & Brazilian Wax

EZ-HOTBEAN-LAV

LAVENDER

Calming properties of *Lavandula Angustifolia* reduces redness & blotches, is an anti-inflammatory that soothes & heals reddened skin.
 Titanium Dioxide prevents irritation to skin, minimal risk to sensitive skins

EZ-HOTBEAN-RS

ROSE

Titanium Dioxide prevents irritation to skin, allowing minimal risk to sensitive skins. It is gentle & lubricating ideal for redness-prone skins & clients
 .Excellent for sensitive areas and perfect for Brazilian Waxing

EZ-HOTBEAN-WA

HONEY / WARM

Contains **Beeswax**
 Suitable for all skin types

☞ Paraffin Wax 1kg

EZ-PARA-JASMINE

JASMINE

Paraffin treatments create an invisible barrier on your skin helping it to retain the oils that your body naturally produces. It is effective in soothing and softening the skin and especially helpful healing dry, cracked skin on the heels. The warmth of the treatment is also very therapeutic for arthritis and rheumatism sufferers

EZ-PARA-LEMON

LEMON

Paraffin treatments create an invisible barrier on your skin helping it to retain the oils that your body naturally produces. It is effective in soothing and softening the skin and especially helpful healing dry, cracked skin on the heels. The warmth of the treatment is also very therapeutic for arthritis and rheumatism sufferers

EZ-PARA-PEACH

PEACH

Paraffin treatments create an invisible barrier on your skin helping it to retain the oils that your body naturally produces. It is effective in soothing and softening the skin and especially helpful healing dry, cracked skin on the heels. The warmth of the treatment is also very therapeutic for arthritis and rheumatism sufferers

EZ-PARA-STRAWBERRY

STRAWBERRY

Paraffin treatments create an invisible barrier on your skin helping it to retain the oils that your body naturally produces. It is effective in soothing and softening the skin and especially helpful healing dry, cracked skin on the heels. The warmth of the treatment is also very therapeutic for arthritis and rheumatism sufferers

EZ-PARA-VANILLA

VANILLA

Paraffin treatments create an invisible barrier on your skin helping it to retain the oils that your body naturally produces. It is effective in soothing and softening the skin and especially helpful healing dry, cracked skin on the heels. The warmth of the treatment is also very therapeutic for arthritis and rheumatism sufferers

☞ Waxing Accessories

EZ-AWCG EZ-AWCG-LT After Wax Cooling Gel

A soothing cooling gel that contains Aloe Vera for its anti-oxidant properties and ability to heal burns. Use as an after-wax treatment for soothing relief. Available in a 250ml pump dispenser and a 1 litre Refill bottle

EZ-PWC EZ-PWC-LT Post Wax Lotion

A soothing moisturising cream that contains Rose for an excellent emollient of dry skin as well as anti-inflammatory properties. Use as an after-wax treatment for calming relief. Available in a 250ml pump dispenser and a 1 litre Refill bottle

EZ-PWO EZ-PWO-LT Post Wax Oil

A rich moisturising oil that contains Rose for an excellent emollient of dry skin as well as anti-inflammatory properties. Use as an after-wax treatment for smooth supple skin. Available in a 250ml spray dispenser and a 1 litre Refill bottle

EZ-PWL EZ-PWL-LT Pre Wax Lotion

Pre Wax Lotion

A hygienic cleansing lotion that contains Tea Tree for its sanitising and antiseptic qualities without drying out the skin. Use as a pre-wax treatment for cleansing and preparing skin for waxing. Available in a 250ml spray dispenser and a 1 litre Refill bottle

EZ Accessories

IT-WAXROLL

100m Depilatory Roll

- 100gsm thickness
- Helps prevent wax penetrating through the strip
- Cost-effective
- Durable
- Size: 7.6cm * 100m

IT-WAXSTRIP

100 Depilatory Strips

- 100gsm thickness
- Helps prevent wax penetrating through the strip
- Cost-effective
- Durable
- Pre-cut for your convenience
- Size: 7.6 * 23cm

EZ-COLLAR

Protective Wax Collars 50s

To prevent wax build-up in your heater that could lead to faults and possibly fire-risk.

To use: Slip your wax in into the collar and pull collar up to the top of the tin. Then place wax tin into the heater. Change regularly.

EZ-TIN1 800g

EZ-TIN 500g

Empty tins (no lids)

EZ-PWS-SM (68x140)

Plastic wax sheets to protect your massage couch, very durable and easy to clean

WA100 Wooden Spatulas (body) Box of \pm 100

WA50S

Facial Spatulas (local)

WA50S-100

Facial Spatulas (imported)

Exfoliation

BCS-SP

Body Exfoliating Sponge

To remove the dead skin off your body prior to waxing, assists in preventing ingrown hairs and is great for circulation.

M-G80

Nylon Exfoliating Gloves

For those who prefer a more gentle exfoliation these pairs of exfoliating gloves are an excellent choice.

SS870

Ingrozero Ingrown Hair Serum each

Manufactured by Salon Specifics

A revolutionary solution to problematic ingrown hairs. This formula has been clinically proven & contains key ingredients effective in both the treatment & prevention of ingrown hairs

SS865

Ingrozero (carton 12 pc)

Ingredients:

Anasensyl for relief & calm

Salicylic Acid for exfoliation

Triclosan as antibacterial

Glycerine to reduce dryness

SK-ING

Ingrown Hair Serum

Manufactured by Skin Science

Waxing Kits

We offer a variety of different waxing kits to suit any Salons needs. Waxing kits offer a cost-effective solution for students or Salon start-ups. All EZ kits are packaged in a Pro Quip travel bag for your convenience

EZ695 Single Waxing Kit

Consists of:

- | | |
|-----------------------------|-----------------------------|
| 1 x 800g Wax Heater | 1 x Pre wax Lotion 250ml |
| 1 x 800g EZ strip wax | 1 x Post wax Creme 250ml |
| 1 x kg EZ Hot wax | 1 x Post wax Rose Oil 250ml |
| 1 x pck Pre-cut strips | 1 x talcum powder 50g |
| 1 x pck spatulas 50s | 1 x pck g-strings 10s |
| 1 x pck facial spatulas 50s | 1 x tweezers |
| 1 x Citric cleaner 250ml | 1 x plastic wax sheet SM |
| 1 x pck Wax collars 20s | 1 x PVC kitbag |

EZ795 Double Waxing Kit

Consists of:

- | | |
|-----------------------------|-----------------------------|
| 1 x 800g/500g Wax Heater | 1 x Pre wax Lotion 250ml |
| 1 x 800g EZ strip wax | 1 x Post wax Creme 250ml |
| 1 x kg EZ Hot wax | 1 x Post wax Rose Oil 250ml |
| 1 x pck Pre-cut strips | 1 x talcum powder 50g |
| 1 x pck spatulas 50s | 1 x pck g-strings 10s |
| 1 x pck facial spatulas 50s | 1 x tweezers |
| 1 x Citric cleaner 250ml | 1 x plastic wax sheet SM |
| 1 x pck Wax collars 20s | 1 x PVC kitbag |

EZ895 Super Waxing Kit

Consists of:

- | | |
|-----------------------------|-----------------------------|
| 1 x 800g Wax Heater | 1 x Citric cleaner 250ml |
| 1 x single cartridge heater | 1 x Pre wax Lotion 250ml |
| 1 x 800g EZ strip wax | 1 x Post wax Creme 250ml |
| 1 x kg EZ Hot wax | 1 x Post wax Rose Oil 250ml |
| 2 x EZ cartridges 100g | 1 x talcum powder 50g |
| 1 x pck Pre-cut strips | 1 x pck g-strings 10s |
| 1 x pck spatulas 50s | 1 x tweezers |
| 1 x pck facial spatulas 50s | 1 x plastic wax sheet SM |
| 1 x pck Wax collars 20s | 1 x PVC kitbag |

EZ995 Deluxe Duo Waxing Kit

Consists of:

- | | |
|-----------------------------|-----------------------------|
| 1 x 800g Wax Heater | 1 x Citric cleaner 250ml |
| 1 x 500g Wax Heater | 1 x Pre wax Lotion 250ml |
| 1 x 800g EZ strip wax | 1 x Post wax Creme 250ml |
| 1 x kg EZ Hot wax | 1 x Post wax Rose Oil 250ml |
| 2 x EZ cartridges 100g | 1 x talcum powder 50g |
| 1 x pck Pre-cut strips | 1 x pck g-strings 10s |
| 1 x pck spatulas 50s | 1 x tweezers |
| 1 x pck facial spatulas 50s | 1 x plastic wax sheet SM |
| 1 x pck Wax collars 20s | 1 x PVC kitbag |

PQ-PHBKIT Paraffin Kit

Consists of:

- | | |
|----------------------------|------------------------------------|
| 1 x 4kg Paraffin Heater | 1 x Derma Spray 250ml |
| 2 x kg EZ paraffin wax | 1 x Collagen & Elastin Creme 250ml |
| 1 x pair towelling booties | 1 x pck plastic protectors 50s |
| 1 x pair towelling mittens | |

Waxing Equipment

PQWH
Single Roller Unit

For 100g roller cartridge

Y-DBLPOT

Double Wax Heater 800g / 500g

800g Wax Heater + 500g Wax Heater
Each has its individual variable temperature control
On/ Off switch 350W/220V
ABS plastic Transarent ABS lid

PQRU-S
Single Roller unit with base

On/Off switch on base
Clear window to view wax
Can join 2-3 units together using
one power source
Telescopic base

PQ-4CART
4 cartridge Heater

Can hold up to 4 100 cartridges
Adjustable Temperature control
Wax melts evenly & effectively
Easy clean smooth outer casing
Ideal for Salons with more than
One therapist as it alleviates the
Necessity for multiple cartridge
Heaters in each room

PQWH
800g Wax Heater

Variable temperature settings
Drip tray/spatula rest
Removeable wax container inner
for hot wax
On/Off switch

PQ-800G/CART

800G Wax Heater cw 3 Cartridge Heater

Can heat up 1 x 800g tin of wax + 3 x 100g cartridges
Simultaneously.
Individual On/Off switches for cartrisge heaters
Variable temperature control for 800g wax heater
Cartridge holder/sleeve ABS plastic

PQ-PHB

Paraffin Wax Heater 4kg

Manual temperature setting
Variable temperature control
4 litre capacity

PQW500

500g Wax Heater

Variable temperature settings
Removeable wax container inner for hot wax
Handle to lift hot wax tins

Precautions:

- **KEEP OUT OF REACH OF CHILDREN;**
- Check with your doctor before using if you are on any medication; which can affect the skin or if you suffer from a skin related disorder;
- Do not wax an area if treating with any AHA over 8%, Accutane, Retina or any medication for acne;
- Wax is not suitable if you are pregnant, elderly, have varicose veins, diabetes, phlebitis or any skin irritation;
- Before use, **TEST YOUR SKIN REACTION** by applying the wax to a small part of the area you wish to treat, following the directions for use. If after 24-48 hours there is no adverse reaction, begin using;
- If you have not waxed before we recommend by starting with removing hair from your legs. Only then progress to other sensitive areas;
- Waxing immediately after a bath or shower can cause skin irritation. Leave at least two hours before you commence;
- Do not wax sensitive areas such as nipples, irritated skin, cuts, warts, moles, sunburnt skin, recent scar tissue areas, tattoos, genital areas;
- Do not wax over or around any body piercings;
- Do not wax over an area that has had a Botox injection for at least 72 hours;
- Wax must be at the correct temperature before using, strip wax will have a syrup-like consistency;
- If the wax is going to be used by more than one person avoid wax contamination by discarding the wooden spatula after each use. Do not double dip, this is where the spatula is dipped back into the wax for reapplication;
- It is normal for your skin to turn red after waxing however, if you experience any smarting or tingling during use, remove wax immediately. Use cotton wool soaked with oil to remove remaining residue. If this sensation persists, seek medical advice

Checking Wax Temperature

Dip a spatula/applicator into the wax. If the applicator cannot hold any wax, or is quite runny then it is too hot. If the wax is stringy, lumpy or not a thin texture it is too cold. When wax is at its perfect consistency (sticks to the applicator and has a syrup-like consistency) place a small amount of wax on the inside of your wrist. If the wax feels too hot or leaves a red mark, wait for it to cool before retesting. Bikini, underarms and facial skin is more sensitive than larger body areas, so use wax at a lower temperature to ensure comfortable hair removal.

Directions for Use (HOT WAX):

Please read first before commencing.

1. For perfect results apply a Pre Wax Treatment Spray to remove excess oils, dirt, perspiration and make-up from the skin.
2. Heat wax granules/beads in a container in the wax heater.
3. Test temperature of wax.
4. Determine the direction of the hair growth.
5. Dip the tip of the wooden spatula into wax.
6. Angle the wooden spatula and with a firm action apply a thick layer (approximately 2mm thick) of the **CEZ Hard Wax in the opposite direction** of the hair growth. The bottom end of the application should be slightly thicker so you can grip this when removing.
(If you are using **CEZ Film Wax** the application is approximately 1mm thick also **in the opposite direction as hair growth**)
7. Leave for about 15 seconds until the hard wax is touch dry or 10 seconds for film wax.
8. Make skin taut by tightening muscles or holding the skin firmly.
9. Lift the bottom edge of the hard wax slightly, grip and pull the strip back in one quick movement in the same direction of the

hair growth and as close to the skin as possible.

10. After waxing the entire area apply an **After Wax Treatment Oil/Cream or Gel** to remove any sticky residue from the skin and to calm redness.

WAXING SPECIFIC AREAS:

Professional waxing techniques for optimal results.

UNDERARMS

1. Underarm hair tends to grow in two different directions. Divide the area into two sections (top and bottom). Apply and remove wax in two stages commencing with the bottom section.
2. Apply wax in the opposite direction of the hair growth and remove in the same direction as hair growth.
3. Make sure skin is stretched before removing wax to avoid bruising.

BIKINI

1. Apply and remove wax in small sections following the line of your underwear as a guide.
2. Apply wax in the opposite direction of the hair growth and remove in the same direction as hair growth.
3. Make sure skin is stretched before removing wax to avoid bruising.

EYEBROWS

1. Cover any areas of hair you do not wish to be removed with a barrier cream as a precaution.
2. Start on the outside of the brow area and work your way towards the nose.
3. Apply wax in the opposite direction of the hair growth in small sections only to the hair you want removed. Remove in the same direction of hair growth.
4. Make sure skin is stretched before removing wax to avoid bruising.

UPPER LIP

1. Start on the outside edge of the upper lip and work your way towards the nose, then start from the opposite outside edge.
2. Apply wax in the opposite direction of the hair growth in small sections and remove in the same direction as hair growth.
3. Whichever side you are waxing push your tongue to that side to offer support and stretch the skin to prevent bruising.

CHIN

1. Before applying wax lean head back slightly until the skin is stretched and supported to prevent bruising.
2. Work in small sections as chin hair grows in multiple directions.
3. Apply wax in the opposite direction of the hair growth and remove in the same direction as hair growth

POST WAXING CARE:

- _ Apply an **After Wax Treatment Spray** to remove any sticky residue from the skin and to calm redness;
- _ Avoid hot showers or baths for up to 24 hours;
- _ Do not apply any perfumed body lotions, body powders or body products for 24 hours;
- _ Do not expose waxed area to direct sunlight for 24 hours;
- _ To avoid ingrown hairs exfoliate the waxed area regularly with an exfoliation mitt or exfoliation solution but leave area for at least 48 hours before commencing.

Directions for Use (STRIP WAX):

Please read first before commencing.

1. For perfect results apply a Pre Wax Treatment Spray to remove excess oils, dirt, perspiration and make-up from the skin.
2. Heat wax tin in wax heater or cartridge in cartridge holder.
3. Test temperature of wax.
4. Determine the direction of the hair growth.
5. If using a cartridge roll the cartridge on a depilation strip first to loosen before applying to skin
6. Dip the tip of the wooden spatula into wax.
7. Angle the wooden spatula and with a firm action apply a thin layer of the **€Z Strip Wax in the same direction** of the hair growth.
8. Immediately press wax strip firmly onto wax (**€Z Strip Wax is a lot less sticky than most other waxes therefore the strip needs to be firmly pressed onto the wax**)
9. Make skin taut by tightening muscles or holding the skin firmly.
10. Lift the bottom edge of the strip slightly, grip and pull the strip back in one quick movement in the opposite direction of the hair growth.
11. After waxing the entire area apply an **After Wax Treatment Spray** to remove any sticky residue from the skin and to calm redness.

WAXING SPECIFIC AREAS:

Professional waxing techniques for optimal results.

UNDERARMS

1. Underarm hair tends to grow in two different directions. Divide the area into two sections (top and bottom). Apply and remove wax in two stages commencing with the bottom section.
2. Apply wax in the direction of the hair growth and remove with strip in the opposite direction.
3. Make sure skin is stretched before removing wax to avoid bruising.

BIKINI

1. Apply and remove wax in small sections following the line of your underwear as a guide.
2. Apply wax in the direction of the hair growth and remove with strip in the opposite direction.

- _ Do not expose waxed area to direct sunlight for 24 hours;
- _ To avoid ingrown hairs exfoliate the waxed area regularly with an exfoliation mitt or exfoliation solution but leave area for at least 48 hours before commencing.

After Waxing

1. Do not leave the wooden spatula inside the container after use.
2. Wipe away wax residue from around the outside rim of the container whilst still warm.
3. Replace the cardboard collar with a new one
4. Let the container of wax cool completely before attaching the lid.
5. Store container of wax in an upright position

Troubleshooting

Why is it sometimes hard to remove Strip wax from the skin?

Sometimes, wax can stick stubbornly to your skin and not want to come off. Most of the time, you can expect to remove most of the wax after pressing the strip firmly against the skin. However, if most or all of the product is sticking to your skin like glue, there's probably something more serious going on.

- It's possible that your skin type is overly dry. Skin complexions that lack moisture will try to take it from the wax and hold onto it for dear life. While this can happen anywhere on the body. One solution is to moisturize your skin right before cleansing and waxing.
- It's also possible that the wax wasn't pulled fast enough. If it's not removed quickly, there's not enough force to remove the wax and hair properly. Additionally, hesitating or moving slowly will feel like you're gradually removing a band-aid (which is obviously not a pleasant experience).
- Wax that's applied too thick can cause issues, too. Soft strip wax needs to cover the hair but shouldn't be applied thickly. If so, it might just stay on the skin when the strip is removed.
- Wax will apply thickly when the heated wax isn't warm enough, causing it to not spread as easily on the skin.

Can my client be allergic to wax?

It is possible that your client could be allergic to some of the ingredients inside wax. This is why it is important to do a patch test on the client at least 24-48hrs before the procedure. It is important to read the ingredients inside the wax you are using so that you are aware. Possible irritants/allergies are Beeswax, Titanium Dioxide and even Rosins (Colophony) which is extracted from the pine tree.

Why is my Wax more sticky than usual?

The main ingredient inside waxes is Rosin (Colophony) which is extracted from the Pine Tree. Different areas that it is grown and different times of the year that it is harvested can affect some of the properties of Rosin. €Z uses additional ingredients to combat the stickiness. This is one of the benefits of the range of waxes. They have formulated the wax so that although it is less sticky it does not interfere with its ability to remove all the hair easily and with little discomfort. It is formulated to adhere to the hair and not the skin itself making it less painful and helping prevent the hair breaking and ingrown hairs. This being said as the majority of the products are natural there is a possibility of slight variations between batches

How can I prevent the mess associated with Waxing?

- Prepare for your client in advance and ensure the temperature of your wax is correct
- Use a plastic waxing sheet on your massage bed
- Always use a cardboard collar around your wax tin. They provide a tight fit and should be fitted onto the tin from the bottom up to prevent wax spilling into your heater. Replace the collar frequently
- Wipe the back of your spatula when you dip.

Why does my waxing strip tear?

It is better to use a higher grammage eg 90g or 100g quality depilation strip/roll. Ensure you have pressed the strip firmly onto the wax and are removing it correctly

Why is my Roller Cartridge not 'rolling'?

- Ensure that the safety film is removed properly by holding at a 45° angle and gently rolling over the wheel. Do not jerk the safety seal, this could cause it to snap
- Ensure the wax is heated sufficiently
- Always roll your cartridge onto a Depilation strip first until the wax flows easily before applying to the skin
- Leave the lid of the cartridge on while heating this ensures that the roller head reaches the same temperature as the wax
- Always place the cartridge holder back on its base whilst waxing
- Choose the correct wax for your client and the temperature

Why is my Strip Wax so thick?

- Always place the lid on your wax heater cartridge heater whilst warming the wax
- Ensure the wax is heated sufficiently. Allow sufficient time to heat you wax before appointments
- Always roll your cartridge onto a Depilation strip first until the wax flows easily before applying to the skin
- **It is important to note that creme-based Roller cartridges although ideal for sensitive skins also work better in warmer temperatures. During summer most provinces in South Africa can use creme-based Roller cartridges however areas that experience colder temperatures should use clear wax cartridges during colder periods or change to using the 800g tins of creme wax during these months**

Why is the wax not sticking onto the skin?

- Ensure you have prepped the clients skin correctly before starting to wax to remove any excess oil or creams
- Ensure the client is not perspiring or her/his body temperature is not too high from exertion or exercise
- Turn on your airconditioner or fan in your treatment room to cool the client down
- After cleaning and prepping the skin, lightly apply talc to the dried skin brushing the hair upwards
- The hair that you are trying to remove should not be too long, in some instances it may be necessary to trim it first.

Why is the wax not removing the hair?

- Ensure the skin is prepped and the wax is heated sufficiently
- Hair needs to be at least 6mm long but ideally should not be longer than a cm
- After cleaning and prepping the skin, lightly apply talc to the dried skin brushing the hair upwards

- Applying wax in the wrong direction or removing the wax in the wrong direction makes the hair difficult to remove

Why does my client complain that waxing is painful?

- Certain areas are more sensitive than others
- Some clients have a lower pain threshold than others
- Sensitive skin can also cause more discomfort
- Certain times of the month ladies will be more sensitised to pain
- First time waxing clients do feel a lot more discomfort however as they start to wax regularly they feel less pain
- Hair is nourished by blood and the longer you leave it in-between waxes the stronger the hair gets. Regularly waxing makes it more comfortable and breaks down the density of the hair leaving you with finer terminal hair.
- Your skin oils create a natural buffer between the wax and your skin. As you have to clean and prep the skin before waxing, this is removed. Apply talc powder sparingly to the area, the powder will act as a buffer to minimise discomfort

How can I treat Ingrown Hairs?

- Unfortunately many people are prone to or suffer with ingrown hairs
- Certain areas with coarse hair are more prone
- Regular exfoliation with a body exfoliating sponge or glove can alleviate the issue
- Ensuring the skin is regularly exfoliated and moisturised will assist with preventing dead skin build-up and ingrown hairs
- There are a few cremes available to assist clients if all else fails

EZ Wax

the simple solution to being hair-free
