

# STERIGEL®

WATERLESS, HAND SANITISER

Your hands take a beating when you wash them repeatedly with harsh soap. Now protect them with **Sterigel®** - a unique waterless hand wash with hand softener. **Sterigel®** is a non-greasy, non-sticky, non-irritating skin care formulation that forms a silicone barrier on the skin surface to protect you from disease. **Sterigel®** contains **Qualex®** that kills 99.99% of most disease-causing microbes.

Whenever there is an absence of soap and the washing of hands with water is not possible, **Sterigel®** becomes the best safeguard against bacteria when handling foodstuffs or patients where absolute cleanliness is essential. It is simply spread around the hands in a washing action until dry, which takes place quickly, and within 5 seconds it sets to work disinfecting. **Sterigel®** is ideal for use in hospitals, doctor's, dentist's and physiotherapist's rooms, laboratories, industrial, restaurant and home kitchens, the beauty industry and any place where the transfer of microbes via the hands/legs and feet are a risk.
